

Frequency of retrievals

- Shown as time series is ratio of retrieved pixels (chlorophyll) to total max possible (after land pixels are removed) for each CW box.

(GM, SE, CB)

- Aqua
- Terra
- SeaWiFS

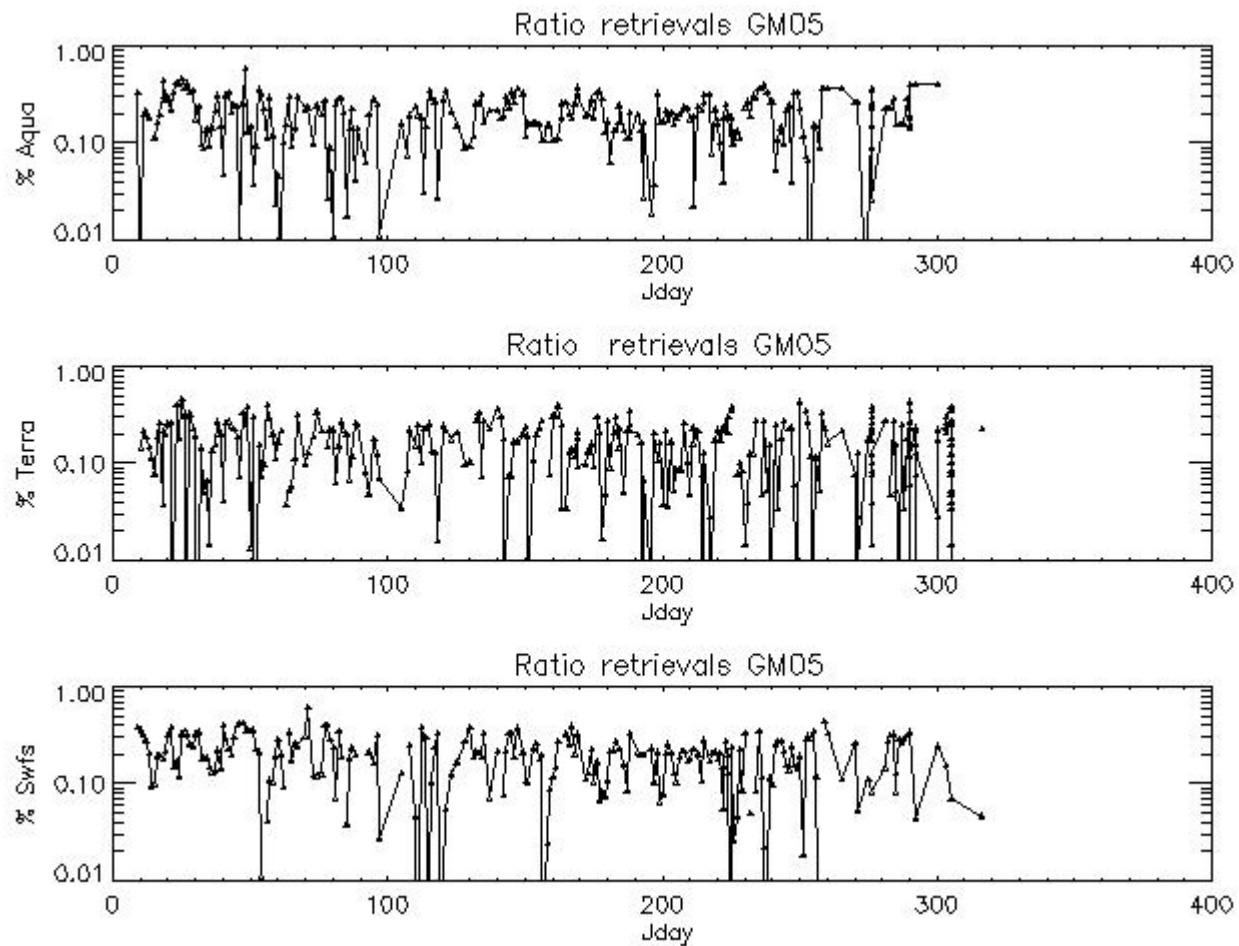

The valid range for the ration is 0 to 1.

It is seen to be mostly around 10% to 40%.

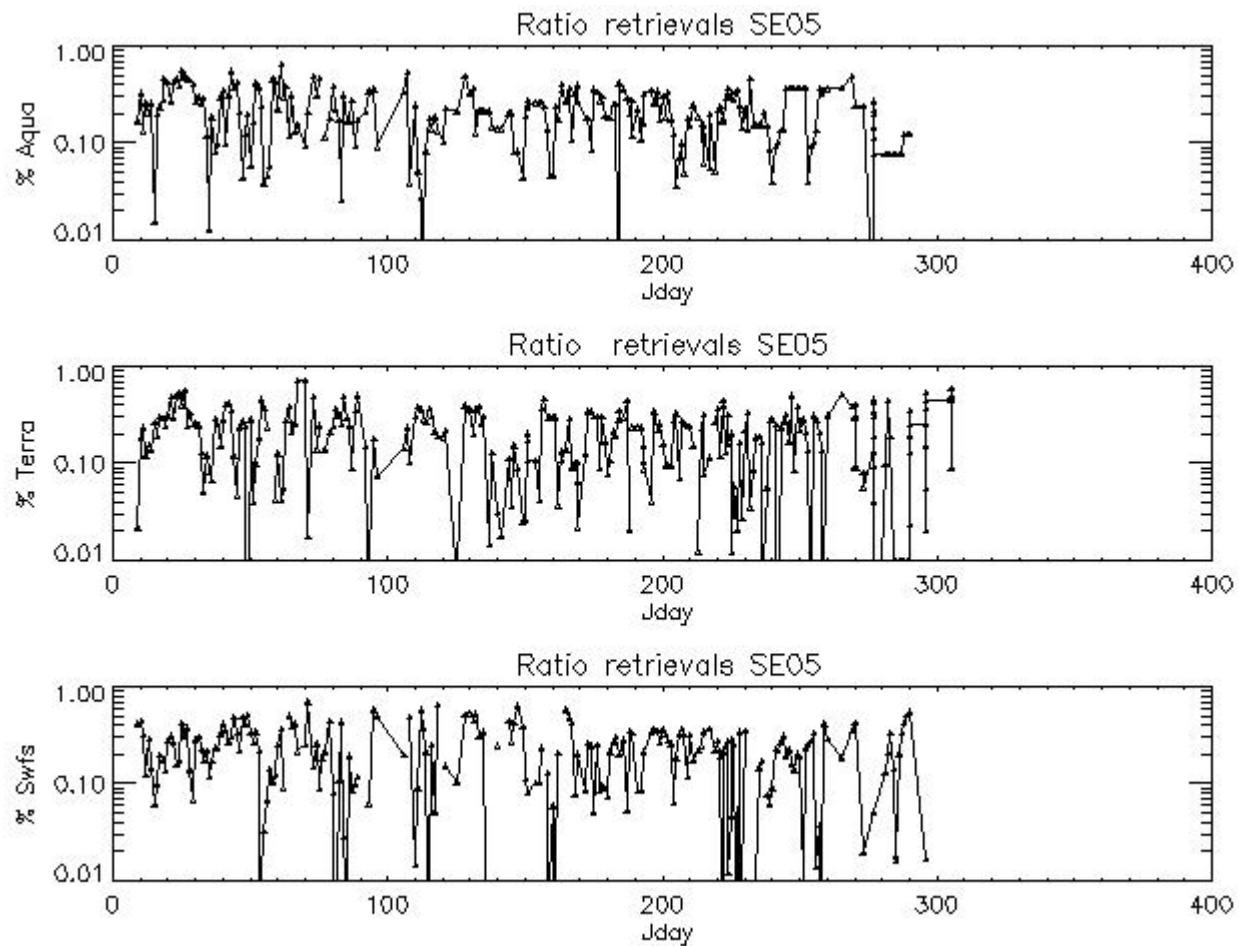

Terra shows lower fraction retrieved compared to Aqua

Aqua's retrieval fraction is similar to SeaWiFS
